TECHNICAL SKILLS

Data Analysis: Data cleaning, exploratory data analysis, KPI reporting, trend analysis, variance analysis, data validation

SQL & Databases: SQL, CTEs, window functions, stored procedures, joins, aggregations, relational data models, PostgreSQL, MySQL

Python & Statistics: Python, pandas, NumPy, scikit-learn, Jupyter Notebooks, descriptive statistics, regression analysis

Dashboards & BI: Power BI, DAX, Power Query, Tableau, Excel dashboards, pivot tables, data storytelling, star schema

Tools & Platforms: Microsoft Azure, Excel, Google Sheets, Agile/Scrum, SAP/ERP concepts, Microsoft Office

EXPERIENCE

Undergraduate Research Assistant

Jan. 2022 – Jan. 2023

The University of Texas at Arlington

Arlington, TX

- Queried a normalized SQL database of 1,000+ employee records to help the research team track payroll accuracy and department headcount – wrote joins and aggregations that replaced manual Excel lookups the team had been running for each report cycle.
- Built Tableau dashboards showing turnover rate and payroll distribution by department; the professor used these in weekly lab reviews, cutting time spent pulling numbers from spreadsheets by an estimated 30%.
- Wrote Python scripts to clean the raw HR dataset – fixed duplicate employee IDs, filled missing department codes, and standardized date formats – so downstream reports stopped breaking on bad data.

Information Technology Support Intern

Jan. 2020 – Dec. 2021

Chowdhury Group

Remote

- Consolidated 200+ staff records, equipment assignments, and onboarding status from separate Excel files into a single SQL database, making it possible for managers to look up any employee or asset in one query instead of searching multiple sheets.
- Wrote Python scripts to pull weekly support ticket data and auto-generate summary reports; built a Tableau dashboard showing ticket volume by category, which helped management spot recurring issues and cut repeat tickets by an estimated 25%.

PROJECTS

Library Management System | PostgreSQL, CTEs, Window Functions, Stored Procedures

2025

- Designed a 6-table normalized PostgreSQL database from scratch and wrote 20 analytical queries using CTEs and window functions to answer business questions like branch revenue by month, overdue rate by member, and top-issuing employees – good practice for the kinds of reporting queries analysts run daily.
- Built stored procedures to handle book checkouts and returns, automatically updating availability status and logging each transaction – replaced what would have been manual record updates and made the workflow repeatable and error-free.
- Used CTAS to create a summary table of active members and flagged accounts with 3+ unreturned books, simulating the kind of segmentation an operations team would use to prioritize outreach.

Sales Revenue Dashboard | Power BI, DAX, Power Query, Star Schema

In Progress

- Building on a public retail dataset – modeled the data into a star schema with a fact table and dimension tables for products, customers, and dates, then wrote DAX measures for month-over-month and year-over-year revenue to practice the patterns used in real BI work.
- Designing an interactive dashboard with KPI cards, a category drill-through, and a variance chart comparing actuals to prior period – focused on making it readable for a non-technical audience rather than just technically correct.

Customer Churn Analysis | Python, pandas, NumPy, scikit-learn, Cohort Analysis

In Progress

- Working with a publicly available telecom churn dataset (7,000+ customers, 20 features) – cleaning the data with pandas, running descriptive stats to understand the distribution, and grouping customers into cohorts to see which segments churn most and when.
- Writing up findings as a short insight summary the way an analyst would present to a manager – covering churn rate by segment, the 2–3 features most correlated with churn, and a simple recommendation on where to focus retention effort first.

EDUCATION

The University of Texas at Arlington

Arlington, TX

Bachelor of Science in Information Systems, College of Business

Aug. 2019 – May 2024

Relevant Coursework: Database Systems, Data Warehousing & Business Intelligence, Statistics for Business Analytics, Systems Analysis & Design

Awards: Maverick Academic Scholarship, Honor Roll, Dean's List
